WHAT IS THIS PRODUCT?

Type: Collective investment scheme established under UCITS Act and complying with Directive 2009/65/EC in relation to the distribution of financial products to retail commercial investors (UCITS fund).

Term: The fund is established for an unlimited period of time. The Management Company may terminate and/or convert the Fund through a liquidation procedure, merger with or acquisition of another fund in the best interests of investors, in accordance with the law and subject to the approval of the Commission.

Objectives: The objective of the Expat Slovakia SAX UCITS ETF is to track the performance of the SAX Index (the "Index"), which consists of the most liquid and large market capitalization companies traded on the Bratislava Stock Exchange. The Index is based on the market capitalisation of the included issues of ordinary shares. The index is rebalanced quarterly. For more information: <http://www.bsse.sk>.

The Fund seeks to achieve a return on your investment through a combination of income and capital growth (total return) that reflects the performance of the Fund's Reference Index (the "Index"). The product's return is directly dependent on the performance of the assets held by the Fund, with the main factors affecting the performance being the investment strategy, the risk profile of the Fund, the recommended holding period, the cost to the investor of making the investment etc. The recommended holding period is a function of the Fund's risk profile, investment policy and expected return. The recommended holding period is calculated in accordance with the Fund's investment strategy and the time frame in which the Fund's investment objective is expected to be achieved. This Fund may not be suitable for investors who plan to withdraw their funds prior to the recommended holding period. Each investment should be considered in accordance with your specific investment objectives and risk appetite (see section "How long should I hold it and can I take money out early?").

The Expat Slovakia SAX UCITS ETF is a passively managed fund and adheres to the full physical replication method of an index. The fund invests only in stocks of the SAX index. The factors that influence the performance of the Fund are the performance of the financial instruments in which the Fund invests, the liquidity of the stocks that are part of the Reference Index, the performance of the market, the expenses of the Fund, etc. The expected tracking error on an annualized basis under moderate market conditions is up to 10%.

Intended Retail Investor: This product is also suitable for retail investors who have basic and/or no knowledge and no or limited experience of investing in funds, who seek to increase the value of their investment within the recommended holding period, and who are willing to take an average level of risk for their initial capital. The Fund is designed for individual investors who are able to bear the potential investment losses associated with this product.
